

Zahariea Cosmin

Data Engineer — Python, SQL, PySpark, Airflow, dbt

Data engineer with 5+ years of experience building ETL/ELT pipelines and system integrations. At Bitdefender I worked with Python, PySpark, Airflow, dbt, Kafka and Databricks on Google Cloud, after years of ERP integration work (Oracle, IFS, Boomi). Today I automate SAP reporting with Python and SQL, and I turned a personal script into a web app that saves my colleagues hours of manual work. Also hands-on with Snowflake on a Shopify commerce analytics project.

Education

Master's Degree in Integrated Business IT Systems

Transilvania University of Brasov, 2022 - 2024

Bachelor's Degree in Automation Engineering

Transilvania University of Brasov, 2017 - 2021

Work experience

Measurement Engineer / Data Analyst — Data Analysis & Process Automation

Distributie Energie Electrica, 04.2026 - present

- Built an internal reporting web app (Angular, Python FastAPI, SQL) from a personal script. Colleagues use it daily and it saves them hours of manual work. As product owner, I gather requirements directly from the users.
- Wrote Python scripts that speed up Excel-based processes, replacing manual Excel reporting with automated data processing (pandas, SQL) on large SAP operational, financial and logistics datasets.
- Run data analytics on those datasets: clustering, cleaning, and automating SAP processes and reporting to cut manual effort.
- Validate transactional data and track down discrepancies between systems, working with cross-functional teams.

Data Integrations Engineer

Bitdefender, 10.2024 - 03.2026

- Designed and orchestrated ETL/ELT pipelines on Google Cloud and Databricks with Airflow, PySpark, dbt and SQL, including data modeling, data quality tests and monitoring. Worked mainly in cloud-based environments.
- Integrated ERP, Salesforce, relational SQL databases, external APIs and reporting systems, and built automations that saved the team a lot of time, with a focus on data quality and security.
- Built reports (including Power BI) that give the business company insights in seconds.
- Worked with Apache Kafka, Databricks and PySpark for big data processing, and helped shape pipeline and integration architecture together with architects.
- Wrote Python for automation, transformation and API communication, with error handling for JSON and XML payloads.
- Used Elasticsearch for indexing and log search, and delivered in Agile teams with Docker, Kubernetes, Git/Bitbucket, Linux and CI/CD deployment pipelines.

Technology Consultant Lead

ArcWide Romania, 04.2024 - 10.2024

- Led technical delivery and business analysis for an ERP financial module covering e-Factura and SAF-T (D406) statutory reporting, and took part in its solution architecture.
- Built integrations with Dell Boomi, Oracle, SQL, PL/SQL and REST/SOAP APIs, connecting the ERP to Salesforce, SAP, Oracle databases and external platforms.
- Designed cloud-to-cloud, on-premises and hybrid Boomi AtomSphere integrations, with mappings, transformations, monitoring and error handling.
- Wrote custom Oracle Reports, Oracle APIs and PL/SQL procedures, functions and triggers, and optimized slow SQL queries.
- Worked directly with clients on requirements and delivery, using Git, Azure DevOps and Agile practices.

Technology Analyst

ArcWide - Romania, 10.2021 - 04.2024

- Built and maintained integrations between IFS ERP and third-party systems using REST/SOAP APIs and Dell Boomi.
- For a client with 2,000+ employees who wanted to speed up company processes, wrote Python scripts that ensure data quality and keep track of it.
